

Appl. No. 10/761,728  
Response to Office Action of June 15, 2005  
Page 2 of 14

**Amendments to the Specification:**

Amendments to the specification are presented below with replacement paragraphs marked up to show changes made relative to the immediate prior version.

Please replace the last paragraph on page 8 (which continues onto page 9) with the following amended paragraph:

Depicted in hub ~~18~~ 14 is bore 26, defined by collar 28 and designed to receive, in use, a rotating shaft. After such a shaft is received in bore 26, fastener 22 may be tightened to fix the position of the shaft relative to hub ~~18~~ 14. One or more openings 30 in hub ~~18~~ 14 receive pins 18. Pins 18 typically are pressed into openings 30 and maintained therein with a friction fit. They need not, however, be so pressed, but instead may be connected to hub 14 in any suitable way or integrally formed therewith.
